

Experiment No. : 1

Title: Demonstrate inline, internal, and external JavaScript; use console methods; create a webpage showing user info and a welcome message.

2. Software/Tools Required: VS code, Web browser

3. Theory:

This experiment demonstrates the three ways of using JavaScript in a web page: inline, internal, and external JavaScript. It also introduces console methods such as `console.log()`, `console.warn()`, and `console.error()` for debugging and testing. A simple webpage is created to display user information and a welcome message, showing how JavaScript interacts with HTML elements to make web pages dynamic and interactive.

4. Output:

Code:

```
<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="UTF-8">
  <title>JavaScript Demonstration</title>

  <!-- Internal JavaScript -->
  <script>
    function showWelcome() {
      document.getElementById("welcome").innerHTML =
        "Welcome to JavaScript Programming!";
    }
  </script>
</head>
<body>
  <h2>User Information</h2>
  <p>Name: John Doe</p>
  <p>Age: 20</p>
  <p>Course: BCA</p>
  <button id="welcome">Show Welcome Message</button>
  <button id="console">Show Console Messages</button>
</body>
</html>
```

```

    }
</script>

<!-- External JavaScript -->
<script src="script.js"></script>
</head>
<body>

    <h1>User Information</h1>

    <p><strong>Name:</strong> John Doe</p>
    <p><strong>Age:</strong> 20</p>
    <p><strong>Course:</strong> BCA</p>

    <h2 id="welcome"></h2>

    <!-- Inline JavaScript -->
    <button onclick="showWelcome()">
        Show Welcome Message
    </button>

    <button onclick="showConsole()">
        Show Console Messages
    </button>

</body>
</html>

// External JavaScript

function showConsole() {

    console.log("This is a log message.");
    console.info("This is an informational message.");
    console.warn("This is a warning message.");
    console.error("This is an error message.");

    console.table([
        { Name: "John Doe", Age: 20, Course: "BCA" }
    ]);

    console.log("Welcome, John Doe!");
}

```

5.Result/Conclusion

The webpage was successfully developed using **inline, internal, and external JavaScript**. The experiment demonstrated the use of **console methods** for debugging and displaying messages, while dynamically presenting user information and a welcome message. It enhanced the understanding of JavaScript integration techniques, basic debugging, and DOM interaction for creating interactive web applications.
